

THIRD PARTY INSPECTION PROGRAM

3PI

SVF Flow Controls has developed the **3PI** program to assist end users with third party inspection. By using our **3PI** program our customers find real savings in time and money.

Save on the costs of hiring an on-site third-party inspection company for your biopharm valves. Avoid the costly delays associated with rejected parts and inspection backlogs. **SVF CleanFLOW** valves are inspected by an independent third-party inspection service to meet ASME-BPE valve standards.

- **SVF** is the only supplier of clean steam, high purity, ball valves to offer third-party inspection documentation with all biopharm valves -- saving you time and money.
- You'll receive an inspection and test report certificate verification packaged with each **SVF CleanFLOW** valve.
- All inspected valves are marked with lot numbers and individually bagged for shipment with material certification and third-party inspection documentation, verifying visual inspection of all component surfaces, dimensional inspection, chemical composition/material verification, and marking verification (heat, surface finish, and lot).

Quality Manufacturing. **SVF** has extensive expertise in high-quality manufacturing. Through our ISO vendor mandates, in-house engineering and complete control over the design processes, we can ensure the highest standard of excellence with all of our biopharm products. **SVF** has earned international recognition, approval, and certifications, including ISO Quality Management Systems. We can manufacture components to ASME/BPE standards and offer FDA-compliant materials.

Quality Components. **SVF** offers an onsite independent third-party inspection service for ASME/BPE pharmaceutical and biopharmaceutical valves, ensuring certification before they go out the door. Additional certifications for select **CleanFLOW** products are available upon request. Please reference the specific product certification documents listed below and contact **SVF** for your specific requirements.
