

"PV" Series Pilot Valve Kit Includes:

- 1 X Valve
- 1 X Set of Fasteners
- 2 X Disc "A"
- 1 X Disc "B"

For Double Acting Actuator use:

- 2 X Disc "A"

For Spring Return Actuator use:

- 1 X Disc "A" plus
- 1 X Disc "B"

NOTE: The SVF Actuators (Aero and Compact4) each have a manifold to which the pilot valve is mounted.

KEEP IN MIND that each of these actuators has a different mounting arrangement due to the manifold porting.

When using the **AERO**, mount the pilot valve as shown **BELOW/LEFT**.

For the **COMPACT4** mount as shown **BELOW/RIGHT**.

PV-3/4 is the universal valve unit part number. This valve may be used as a 3-Way or 4-Way pilot valve by inverting it as described here.

When installed by SVF to an actuator the part number changes to:

PV-4 (4-Way for Double Acting Actuators) or
PV-3 (3-Way for Spring Return Actuators)

NOTE: On all assemblies, ensure that the actuator is cycling in the desired direction. Action may be reversed by inverting the entire valve or (for PV-3) by exchanging the positions of the directional discs.
